Ivan Yemtseu

BACKEND DEVELOPER

Full-cycle Java developer with 2+ years of hands-on experience building production-grade systems — from secure REST APIs and payment flows to Android apps and full-stack monorepos. Currently finishing a Software Engineering degree while actively seeking remote opportunities.

TECH STACK

Core Backend

Java 21 · Spring Boot 3.x · Spring Security · Spring Data JPA · Hibernate · REST API · JWT

Databases

PostgreSQL · MS SQL Server · Oracle SQL · H2 · Flyway

Frontend (basic)

Next.js · HTML5 / CSS3 · JavaScript

API Design

REST API · Webhooks · OpenAPI / Swagger · SMTP

DevOps & Infra

Docker · Docker Compose · OpenShift · Nginx · Linux / VPS · Jenkins · Maven · Gradle

Security & Observability

Bucket4j · Rate Limiting · Sentry · Spring Actuator · Audit Logging

Integrations

Telegram Bot API · Cloudinary · SMTP · reCAPTCHA v3

Testing

JUnit 5 · Mockito · AssertJ · Hamcrest · TDD

Additional

Kotlin / Android · Node.js · C# / .NET · Git

LANGUAGES

Russian
Native

Polish
Fluent (C1)

English
Fluent (B2+)

PROFESSIONAL SUMMARY

Java Backend Developer with 2+ years of Java development experience, including commercial work on production systems. Specialise in building robust backend systems: authentication & role-based security, payment processing, audit logging, rate limiting, and third-party integrations. Hands-on experience with fraud-prevention mechanisms — rate limiting, request validation, transaction audit logging, and secure API design. Delivered end-to-end products from REST API and database design through to Dockerised deployment on Linux VPS. Actively looking for a remote backend role in a team that values clean, testable code.

PROJECTS

Elixir SportShop — E-commerce Platform

Full Cycle · Commercial · 3+ months

Java 21 · Spring Boot 3.x · Spring Security · PostgreSQL · JWT · Bucket4j · OpenAPI · Flyway · Docker · Nginx · Sentry · Spring Actuator

- → Designed REST API and database schema; built full backend: product catalog, cart, order lifecycle, JWT auth with role-based access (customer / admin), Flyway migrations.
- → Implemented secure payment gateway integration with webhook handling and full transaction audit logging.
- → Built fraud-prevention layer: rate limiting (Bucket4j), reCAPTCHA v3, request validation, and Sentry monitoring.
- → Deployed multi-service architecture with Docker Compose, Nginx reverse proxy, and multi-stage builds on Linux VPS.
- → Integrated third-party services: Cloudinary (images), Telegram Bot (admin alerts), SMTP (email). Frontend (Next.js + React Admin) also developed as part of full-cycle delivery.

Wdrozeniowy — Full-Stack Monorepo

Team · Backend · Deputy Scrum Master · Diploma

Java 17 · Spring Boot 3.x · Spring Security · H2 · JWT · Docker · Socket.io · JUnit 5 · Mockito

- → Team diploma project (3 services: Java backend, Next.js frontend, Node.js gateway). Acted as Deputy Scrum Master alongside backend responsibilities.
- → Designed the REST API and database schema; implemented Spring Boot 4 backend with Spring Security and JWT authentication.
- → Set up Docker and Docker Compose for all services; implemented WebSocket communication (Socket.io) between gateway and clients.
- → Covered business logic with JUnit 5 + Mockito unit tests.

Task Manager REST API

Full Cycle

Java 17 · Spring Boot 3.2 · Spring Data JPA · PostgreSQL · Docker · JUnit 5 · Mockito · Lombok

- → Architected a clean RESTful API with full CRUD, input validation, and structured error handling.

EDUCATION

B.Eng. — Software Engineering

Wyższa Szkoła Bankowa Merito, Gdańsk

Expected: February 2027 (Semester 6 of 7)

SOFT SKILLS

- Clean architecture mindset
- Autonomous, self-driven learner
- End-to-end ownership
- Attention to security & reliability
- Adaptable to new tech quickly

→ Designed the database schema and configured Spring Data JPA repositories.

→ Covered service and controller layers with JUnit 5 + Mockito unit tests.

→ Containerised with Docker and docker-compose for reproducible local development.

github.com/IvanYemtseu/task-manager-api

MeritoQuiz — Android Quiz Application

Full Cycle · Mobile

Kotlin Jetpack Compose Material 3 Room SQLite Android SDK 36 Gradle ViewModel Espresso

→ Built a native Android quiz app entirely with Jetpack Compose and Material 3 design guidelines.

→ Implemented local persistence with Room SQLite and lifecycle-aware state management with ViewModel.

→ Applied MVVM architecture; covered UI flows with Espresso and unit tests with JUnit 4.

Playfair Cipher — Desktop Encryption Tool

Full Cycle · Desktop

C# .NET Framework 4.8 Windows Forms

→ Designed and implemented the Playfair cipher algorithm (encryption & decryption) in C#.

→ Built an intuitive Windows Forms GUI for interactive text encoding.

github.com/IvanYemtseu/Playfair-cipher

CRM Backend Optimisation

~6 months · Commercial

Java Spring Boot PostgreSQL Query Optimisation Spring Actuator

→ Profiled and optimised backend bottlenecks in a production CRM — reduced average response latency by ~30%.

→ Rewrote N+1 queries, added strategic indexes, and refactored service-layer logic.

→ Introduced monitoring via Spring Actuator and documented optimisation strategies.
